

Stop unwanted behaviour

Use the Mosquito Mk4 Anti Vandal System

The Mosquito Anti Vandal System is the solution to the eternal problem of unwanted gatherings of youths and teenagers. Reduce expensive vandalism and graffiti once and for all with the Mosquito.

Reduce vandalism

Reduce theft from and damage to property

Increase the quality of life of those affected by anti-social behaviour

The Mosquito MK4 Anti Vandal System uses one of two tone settings to disperse groups—a 17KHz setting that is specific to youths, or when set at 8KHz, it is audible to persons of any age.

The 17KHz 'high' tone is generally not noticed by people just passing by. The device only takes effect after a few minutes of exposure.

Designed to discourage loitering 'after hours' in areas such as car parks, green spaces, school grounds, industrial estates or any other areas where people may feel unsure at night.

The Mosquito is not a weapon, it is non-violent and it does not hurt or cause harm to people or animals.

The Mosquito MK4 System will:

- Disperse groups of youths or persons with ease
- Has multiple control options including remote and timed activation
- The use of a PIR to activate the system means that it will only turn on when there is movement in the specified location

The Mosquito Mk4 can be easily installed by an electrician as a standalone device, or added to an existing security system by a technician.

Mosquito MK4 Features:

- 2 frequency settings
- 4 step volume selection
- Audible beep on/off
- 20 minute auto cut-off
- Inbuilt PIR activation timer control

Protecting a Grand Old Lady

Massey Grandstand in Papakura, Auckland, had been a target for graffiti artists and arsonists for a long period of time. In August of 2009, youths used straw to light a fire that nearly destroyed the historic grandstand that was once sited at Eden Park.

L to R: From the 1950's, the Massey Park Grandstand on the left; Damage from the arson attack in 2009.

The Council rebuilt the burnt grandstand back to its former glory and in conjunction with local community group Safer Papakura, installed a Mosquito Unit high in the rafters.

Since its installation there has been minimal damage to the stand. With the Massey Park complex now in for a total modernisation, the Council has specified that the Mosquito Unit is to be included in all tenders put forward for the construction works. Vandals can be assured that the Mosquito will continue to protect Massey Park.

The Mosquito MK4 is sold in kits made up of various components including a solar powered option, and a portable version.

Enquire with us for more information.

Kits start from as little as
\$1,350.00
+ GST and freight

Basic Kit includes Mosquito Unit, Security Cage, PSU and Timer

"Their installation has eliminated particular part of the school from being considered suitable gathering areas, and so far we are absolutely delighted with their effectiveness."

- Steve Collins, Whangaparoa School Principal

"They're cost effective, can run on solar power and, because they are timed to turn on only in unsociable hours, they don't affect other people's enjoyment of public spaces."

- Const. Simon Brown, New Zealand Police

"It is part of our Safety in the Park Strategy. It hasn't harmed kids hearing in other places, it's not going to harm them otherwise we wouldn't have put it in."

- Sandra Hazlehurst, Hastings District Councillor
